## LSR - Logical shift Right

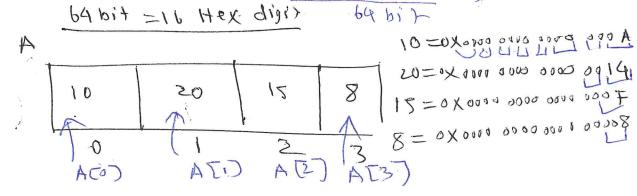

- LSR instruction effectively divides the contents of a register by 2<sup>i</sup>. For example, the below LSR shifts by 3, which divide the contents of X2 by 2<sup>3</sup> or 8 and place the result on destination register X0.
- Each bit of the register is shifted right, the LSB is removed, and empty bits are filled with zeros. % = 24

LSR X6, X2,#3 // X0 = 
$$\frac{x2}{2^3}$$
 =  $\frac{24}{8}$  = 3

**Problem:** Assume that X2 = 24 (  $0X00000000000000018^{t}$  in hexadecimal). What will be the value of X0 after running the following instruction: LSR X0, X2, #2

Memory

The ARM CPU allows direct access to all locations in the memory, but they are done with specific instructions. Since these instructions either load the register with data from memory or store the data in the register to the memory, the are called load/store instructions.

## **Load Instruction**

- LDUR X2, [X5, #0] instruction copies the content of the memory locations pointed by X5 + 0 into register X2.
- Since the X2 register is a 64-bit wide, it expects a 64-bit operand in the range of 0X00000000000000000 to 0XFFFFFFFFFFFF.

LDUR X2, [X5,#0] Memory,

X5+0

**OXFFFFFFFFFFFFF** 2.3 0X8000000000004007 02 0X8000000000004006 X2=2302180A0C5 A22815. 130 0X8000000000004005 Hex value Ab-0X8000000000004004 65 0X8000000000004003 A 2 0X8000000000004002 0X8000000000004001 28 0X8000000000004000 0X0000000000000000 Memory

**Example:** Convert the following C++ code to LEGv8 Assembly code. Assume A is an Array of 10 doublewords, variable g and h are associated with registers X20 and X21, and base address of the array A is in X22.

(1) 
$$g = h + A[I]$$
:

(2)  $g = h + A[I]$ :

(2)  $g = h + A[I]$ :

(2)  $g = h + A[I]$ :

(3)  $g = h + A[I]$ :

(4)  $g = h + A[I]$ :

(5)  $g = h + A[I]$ :

(6)  $g = h + A[I]$ :

(7)  $g = h + A[I]$ :

(8)  $g = h + A[I]$ :

(9)  $g = h + A[I]$ :

(1)  $g = h + A[I]$ :

(2)  $g = h + A[I]$ :

(2)  $g = h + A[I]$ :

(3)  $g = h + A[I]$ :

(4)  $g = h + A[I]$ :

(5)  $g = h + A[I]$ :

(6)  $g = h + A[I]$ :

(7)  $g = h + A[I]$ :

(8)  $g = h + A[I]$ :

(9)  $g = h + A[I]$ :
